

# Model JYB-KM

*Mini and Low Cost Diffused Silicon Pressure Transmitter*

## DESCRIPTION

Model JYB-K M is a cost efficient general purpose gage-only diffused Silicon pressure transmitter. Each unit is constructed of welded stainless steel for durability in dry rugged environments. Both gas and liquid pressure overloads of up to 50% over capacity are safely accepted. The transmitter uses our proprietary current output with digital compensation. This design references the primary pressure sensing diaphragm to the atmosphere, and provides a stable zero regardless of the transducer environment.

## FEATURES

## NOTES

- 1• Because the sensor belongs to the precision component, in order to prevent damages of the product, don't disassemble voluntarily and touch a film slice, please.
- 2• When make a survey of high-pressure, must install buffer equipment in the exit of the connection between the sensor and the medium, which can avoid the momentary pulse high-pressure and the damages of sensors.
- 3• Accuracies stated are expected for best fit straight line for all errors including linearity, hysteresis & non-repeatability thru zero.

## MOUNTING DIMENSION

- M12×1 Bayonet plug (IP67)

- DIN43650 Plug/Socket (IP65)
